

RESUME

Batmagnai Ganbaatar

Front-End Developer · AI Developer

✉ batmagnai.ganbaatar@gmail.com  GitHub  batmagnai-portfolio.netlify.app

SUMMARY

Front-end developer building practical web tools and AI applications — from clean vanilla JavaScript interfaces to Python-based AI tools with RAG pipelines and LLM generation. Based in Tokyo, bilingual in English and Japanese, and open to IT Support and developer roles.

Experience

2024 – Present

Front-End Developer · Self-directed

Independent / Portfolio Projects

- Built and deployed a minimalist portfolio with a custom Mirror's Edge-inspired design system using vanilla HTML, CSS, and JavaScript.
- Developed PromptKit v2 — a client-side prompt engineering tool with localStorage persistence, live preview, and multi-mode output.
- Built AI Handbook Generator — a Python/Gradio app that generates 20,000-word documents from PDFs using a custom RAG engine and the LongWriter technique, deployed on Hugging Face Spaces.
- Implemented dark mode, accessible markup, mobile-responsive navigation, and consistent UI patterns across 7+ pages.

2022 – 2025

Instructor · NOVA Co. Ltd.

Fukuoka, Japan · Contract

- Delivered structured lessons to learners with varied language levels and learning styles.
- Adapted explanations in real time to improve understanding — a communication pattern directly applicable to technical support and documentation roles.
- Built strong habits in structured explanation, user-focused communication, and problem-solving under live conditions.

Selected Projects

RetireAI

Next.js TypeScript Tailwind Supabase Claude AI

Full-stack AI SaaS · 2026

- Built a retirement planner SaaS with savings projections, scenario comparison, and Claude-generated personalised reports.
- Integrated Supabase auth, PostgreSQL with Row Level Security, and the Anthropic API via a secure server-side route.

[Case study](#) → [Live demo](#) → [Source](#) →

Tokyo Neon Kissa

Next.js React TypeScript Tailwind

Bilingual full-stack web application · 2026

- Built a bilingual (EN/JP) cocktail bar app with reservation workflow for Tokyo nightlife venues.
- Implemented responsive layout, language switching, and cocktail discovery with filtering.

[Live demo](#) → [Case study](#) →

PromptKit v2

HTML CSS JavaScript

Front-end AI workflow tool · 2026

- Client-side tool for creating, saving, and reusing structured AI prompts with persistent state.
- Supports 4 output modes (portfolio, readme, linkedin, web) and 4 tone settings. Zero backend.

AI Handbook Generator

Python

Gradio

Groq API

RAG

AI tool · 2026

- Built a custom vector RAG engine using sentence-transformers and numpy cosine similarity — no external vector DB required.
- Implemented the LongWriter/AgentWrite technique to generate 20,000+ word structured documents across 12–16 sections.

[Live demo →](#) [Case study →](#)

Minimalist Portfolio

HTML

CSS

JavaScript

Personal portfolio & design system · 2026

- Designed an original Mirror's Edge-inspired visual system with angular geometry, red accent, and dark mode.
- Built accessible, responsive layout from scratch — no frameworks, no build tools.

[Live site →](#)

AI Job Application Assistant

Python

Gradio

Groq API

AI workflow tool · 2026

- Built a Gradio app that generates a tailored cover letter, CV suggestions, skills analysis, interview questions, and salary estimate from a job description and optional PDF CV upload.
- Implemented per-section streaming output with a live progress bar, single-click Markdown export, and Cmd+Enter shortcut.
- Designed a full dark iOS-style interface in plain CSS — gradient background, card elevation, animated gradient button, toast notifications, and copy-all functionality.
