Summary

Built and shipped multiple AI-powered full-stack applications from scratch — RAG pipelines, LLM API integration, SaaS with auth and live data visualization. Open to AI engineering, full-stack, or AI-adjacent product roles in Tokyo or remote.

Projects

AI Handbook Generator

2026

Python · Gradio · LightRAG · Supabase (pgvector) · xAI API

- Built an end-to-end AI application: upload PDFs, query via chat, and generate structured 20,000-word handbooks
- Implemented a RAG pipeline using LightRAG and Supabase pgvector for vector storage and session history
- Applied the LongWriter (AgentWrite) technique — section-by-section generation with rolling context — to produce long-form output beyond token limits
- Integrated the xAI Grok 4.1 API with streamed live output during multi-minute generation tasks

RetireAI

2026

Next.js 15 · TypeScript · Tailwind CSS v4 · Supabase · Claude API · Recharts · Vercel

- Built a retirement planner SaaS with savings projections, scenario comparison, and Claude-generated personalised reports
- Integrated Supabase auth and PostgreSQL with Row Level Security for secure per-user data
- Built a secure server-side API route to call the Anthropic Claude API — key never exposed to the client
- Created interactive charts with Recharts, deployed to Vercel with securely managed environment variables

Wander

2026

Next.js · TypeScript · Claude API · Supabase · Framer Motion · Mapbox

- Built an AI travel discovery app with a multi-mode interface — natural language chat, guided choice chips, and one-tap Surprise Me — powered by the Claude API
- Engineered 5 API routes: destination suggestions, packing list generator, itinerary builder, similar destination finder, and item info enrichment
- Implemented 3D card tilt with image parallax, cinematic stagger reveal, and an animated aurora background using Framer Motion
- Built result caching in Supabase using SHA-256 preference hashing — show more bypasses cache to return fresh destinations every time

Tokyo Neon Kissa

2026

Next.js · React · TypeScript · Tailwind CSS · Claude API · Resend · Vercel

- Built a bilingual (EN/JP) cocktail bar app with an AI virtual host "Hana" — a Claude-powered chat answering questions about the menu, hours, and reservations in the guest's language
- Developed a reservation system with backend API routes and transactional email notifications via Resend
- Implemented a cocktail finder with mood and sweetness scoring, Google Maps integration, and bilingual language switching with localStorage persistence

Skills

Languages: JavaScript, TypeScript, Python, HTML, CSS, C# (foundational)

Frameworks & Libraries: React, Next.js, Tailwind CSS, Node.js, Gradio

AI & Data: RAG pipelines, LightRAG, pgvector, prompt engineering, xAI / Groq / Claude APIs

Back-End & DBs: REST API routes, Supabase, PostgreSQL, email integration (Resend API), pdfplumber

Tooling: Git, GitHub, Vercel, Netlify, VS Code

Certifications

Meta Front-End Developer Professional Certificate

Meta / Coursera

Foundational C# with Microsoft

freeCodeCamp

Experience

English Instructor

Mar 2026 – Present

Yaruki Switch Group · Tokyo, Japan

- Teaching across multiple age groups and proficiency levels in a high-volume, fast-paced environment
- Designing lesson materials from scratch — clear structure, measurable outcomes, adapted per learner
- Working within a larger team across branches — communication, handoffs, and consistency across instructors

English Instructor

Jun 2022 – Dec 2025

NOVA Co. Ltd. · Fukuoka, Japan

- Planned and delivered structured lessons across varied skill levels and backgrounds
- Adapted communication style to individual needs — strong habits in problem diagnosis, clear explanation, and iterative improvement

Education

Bachelor of Business Administration

2017 – 2022

Ritsumeikan Asia Pacific University, Beppu, Japan
